

ARCHCOACH™ HOPS for ARCHES

Adjust the ArchCOACH™ to the position shown. For “arch” exercises the ArchCOACH™ strap must course from on top of the foot around under the arch of the foot and is held by the same hand as the foot you are strengthening.

The ArchCOACH™ “X” gives an estimate of the direction in which to apply the strap. For “arch” exercises begin the strap at the front outside of the top of the foot and attach it so that the ArchCOACH™ velcro runs diagonally across the ArchCOACH™ “X”.

Next apply resistance by pulling the strap onto the desired tension. Slightly roll your foot out against the resistance of the ArchCOACH™ and maintain this foot position against the resistance.

To perform the exercise, place your feet 10cm apart and rise up on to your toes in one explosive effort leaving the ground ever so slightly.

Do not let the resistance from the ArchCOACH™ roll your foot in at any stage throughout the hop.

Repeat these hops as instructed by your therapist.
